

Sustainable Water Management Policy

The company is committed to efficient water resource management throughout the production process to reduce water loss and dependence on external water sources. This commitment follows the 3R principles: Reduce, Recycle, and Reuse. By doing so, the company supports environmental conservation, which is often part of its corporate social responsibility policy. The company has established the following guidelines:

1. Set short-, medium-, and long-term goals for efficient water management.
2. Analyze and assess water-related risks and increase the proportion of water reuse and recycling.
3. Conduct business operations without impacting the surrounding community's access to water and wastewater discharge.
4. Develop technology and innovations in water resource management to reduce water waste by reusing water.
5. Monitor and maintain water quality from all business activities, ensuring wastewater treatment before discharging into public water bodies as per legal requirements.
6. Set specific targets to reduce water usage or pump out water only from affected areas.
7. Communicate and raise awareness about water conservation and sustainable water use among company employees.
8. Disclose water resource management performance and progress towards goals through the sustainability report to stakeholders annually.
